

Ensenso 3D cameras now TM Robot “Plug&Play” certified

A whole range of components already pre-installed in the TM robot system – such as screen, keyboard, and various grippers – ensure that the company's lightweight robots are quickly ready for operation through simple plug & play. Now, Ensenso 3D cameras of the N30/35 series have been “TM Plug&Play” certified by Techman Robot.

Users can simply connect these 3D cameras with TM Robot's IPC and start using the 3D bin picking application without the need to develop their own image processing application. This saves valuable development and integration time. The flexibility of Techman Robot systems in combination with Ensenso 3D cameras from IDS cover a wide range of possible application scenarios.
