

# Visit us in October at VISION in Stuttgart, Germany

## Products, lectures, ticket codes - all information about VISION now on the IDS website

In the IDS anniversary year, we are particularly pleased to present our numerous new and further developments to you at VISION. True to the motto "Moving Forward", we will be presenting the next development stage of the IDS NXT AI vision system, showing the possibilities of combining 10GigE and TFL mount in the uEye Warp10 family and expanding the product portfolio with tiny board-level cameras. And that is by far not all...

VISION, the world's leading trade fair for machine vision, will take place this year from 4 - 6 October. Use the code "IDSVISION2022" and visit us with a free day ticket at booth 8C60. There you will discover, among other things, exciting further developments regarding the hardware and software of IDS NXT: we not only extend the machine learning methods with anomaly detection, but also present an additional, significantly faster hardware platform.

This year, we are also placing special focus on the online marketplace visionpier. On it, users will find numerous image processing solutions, both with classic image processing technology and with artificial intelligence. They can easily choose the system that suits them and get in touch with the suppliers. At the trade fair, we will present the possibilities and advantages in detail.

You can find out what other highlights we are preparing for you on our trade fair landing page. From demo systems to lectures, there is plenty for you to enjoy - we look forward to your visit!
