

Help to self-help with IDS sherpa

With the experience gained from countless industrial camera projects and through many years of cooperation with IDS Software Suite users, we have created IDS peak as a helpful and intuitively usable software package for handling our Vision Standard cameras. True to our slogan "It's so easy", IDS customers benefit from easy handling and unlimited manufacturer support for new camera projects, even in the Vision world.

IDS peak also helps you to get started and change over to applications with USB3 and GigE Vision-compliant cameras very quickly thanks to its extensive support and intuitive programming interface. Do you lose a lot of time by time-consuming re-programming of existing IDS Software Suite applications? Not with IDS peak!

In our video tutorial "[Vision standard application in just a few steps](#)" we show you how to kill two birds with one stone. Port your IDS Software Suite application for use with Vision Standard cameras in just a few steps and learn how convenient and easy programming with IDS peak can be. Using GenICam-based camera software does not have to be complicated. Use IDS peak and discover the world of Vision with completely new possibilities.
