

Knowing more: these are the next IDS Vision Channel Highlights

ALL ABOUT MACHINE

From 3D data acquisition to object detection with AI - first-hand expert knowledge

What is the best way to capture 3D data for measurement and inspection applications? And how does image processing with AI help locate, count and distinguish scattered objects in complex environments? Learn more - on the IDS Vision Channel.

We appreciate your positive feedback on the digital live sessions on the IDS Vision Channel (www.ids-vision-channel.tech) and would like to show you what future events we have in store for you. By clicking on agenda (<https://ids-vision-channel.tech/agenda>) you can see what you can expect in the coming weeks. Register free of charge and benefit from our expert knowledge. After the sessions, we will answer your questions at virtual tables - we are looking forward to seeing you soon!

The highlights of the coming weeks include:

3D metrology in automation engineering

Speaker: Ute Seitz, Machine Vision Specialist

Date: Tuesday, April 27th, 2021

Time 1: 8:30 am CET (UTC+2)

Time 2: 3:30 pm CET (UTC+2)

[REGISTER NOW!](#)

Spotlight on Object Detection with IDS NXT ocean

Speaker: Alexander Windberger, AI Specialist

Date: Tuesday, May 4th, 2021

Time 1: 8:30 am CET (UTC+2)

Time 2: 3:30 pm CET (UTC+2)
